

Mobile App Development – Interview Task

User Roles

The app should have 3 user dashboards:

1. **Customer**
2. **Dealer**
3. **Plumber**

Core Requirements

1. Login & Registration

- Login through **OTP only**.
- Customers can register/login using their mobile number.
- Dealers can login **only if their mobile number is registered and verified in Zoho**.
- Plumber login should follow the defined verification process.

2. Products & Pricing

- Products, pricing and stock should be fetched/synchronised from **Zoho Workbook**.
- Customers can view products and prices but **cannot see stock quantity**.
- Dealers can view **available stock quantity**.

3. Customer Flow

Login → Dashboard → Categories → Products → Product Details → Cart → Checkout → Direct Payment → Order Confirmation → Order Tracking

4. Dealer Flow

OTP Login → Zoho Verification → Dealer Dashboard → Products → View Price & Stock → Cart → Checkout

Dealer payment options:

- **Upfront Payment**
- **Credit Payment – 30 Days**
- **Credit Payment – 90 Days** (only for selected/approved dealers)

5. Plumber Flow

- **OTP Login**
- **Plumber Dashboard**

- Product/required functionality
- Orders or assigned activities
- Profile & notifications

6. Admin Requirements

Admin should be able to manage:

- Customers
- Dealers
- Plumbers
- Products
- Orders
- Payments
- Dealer credit eligibility
- 30/90-day credit permissions
- Reports

Expected Interview Output

Please prepare a **basic app flow/wireframe** showing:

- Login & OTP flow
- Customer dashboard and purchase flow
- Dealer dashboard and purchase/credit flow
- Plumber dashboard
- Zoho integration points
- Admin functionality
- Key differences between Customer and Dealer access

Focus: User experience, application flow, business logic, API/integration understanding, and how you would develop the application end-to-end.
